

SourceTrace. in 2022

Digitally transforming
agri-food industry, globally.

We digitized a Barley supply chain that included seed & grain purchase, warehouse stock management, API integrations for digital payments and multi-approval process for both grain purchase and payments.

We built a platform for supply chain management of horticulture crops. We mapped the crop area for each farmer and automated allocation of inputs based on the crop area. A market linkage platform was built so that the CBO can display their products.

Source*race*.

We built a supply chain management system for shea nuts that tracked movement of nuts between different warehouses and enabled stock management.

We created a national horticultural traceability system that enabled tracking harvesting, procurement, packing, processing and shipping with QR code validation at various points.

We delivered a payment and inventory management system to maintain transactions of inputs distributed, produce collected along with request for payment feature and validation of produce collection.

Sourcel^{ra}ce.

We created a mint traceability system for geo plotting, sapling reception, delivery, herbage data, distillation and transfer to processing center.

Source*leaf*race.

We created a agro-input traceability system for registration and certification of agrochemical dealers, importers and exporters. This also includes import permit issuance and different level of inspections.

Sourceleafrace.

We created a holistic growth practices and supply chain monitoring system for multiple crops that captured and analyzed data on farmer, farm, crop calendar, input distribution, warehouse stock, labour costs, grading activity, packing, dispatch and consumption

We created a knowledge management portal for a gender-based climate adaptation project that included beneficiary selection, training schedule, input distribution, knowledge dissemination, capacity building, gender survey tool creation, fund management and more

Sourcerace.

SourceTrace.

We created a coffee information management portal that enabled farmers to apply for finance and processes payments via various options. Farmers can also apply for inputs via the platform and get them delivered.

SourceTrace can be the only platform you need for all your agri-food data needs.
